

2nd Tier Screening Results

Necessary Next Steps and Immediate Recommended Actions

MPS-I | Mucopolysaccharidosis Type I

Results Summary:

The infant referenced had a newborn blood spot specimen collected, and initial screening results prompted second-tier testing for further evaluation. Findings from second-tier analysis indicate a **High Risk** for **MPS- I** and a **prompt referral to a Metabolic Specialist** for a comprehensive diagnostic assessment is necessary. Please review the attached report(s) for complete results and interpretation; any outstanding reports will be forwarded upon receipt, if applicable.

NEXT STEPS: within 24 hours of 2nd tier results

- ☐ **Contact a Metabolic Specialist to review the second-tier screening results and determine recommended next steps, including any indicated diagnostic evaluation.**
- ☐ **Notify the parents/guardians of the newborn screening results.**
